## CES XF Splash Fill Accessories

### Product Description

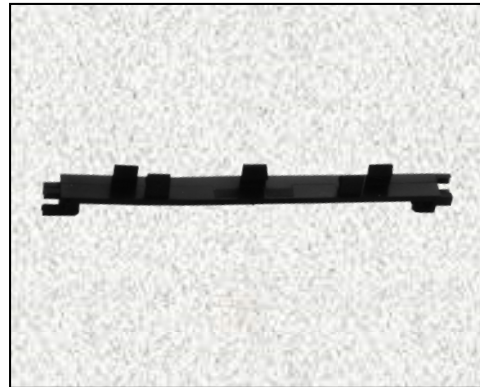

CES Fill Hanger Brackets are manufactured from high quality, corrosion resistant polypropylene and are designed to work in concert with CE Shepherd fill hanger wire to make your fill installation more reliable than other methods. The brackets are available in two foot lengths and can be attached to any type of fill support beam used in your cooling tower.

CE Shepherd Fill Retainer Clips are manufactured from high quality, virtually unbreakable polypropylene. They are used to secure CE Shepherd Gull Wing or V-Bar Splash Fill slats to Shepherd Fill Slat Hangers mesh. Shepherd Retainer Clips are available for 4" or 6" Gull Wing and 4" V-Bar. Use of these clips at each hanger wire interface will insure the ultimate in fill system reliability.

Since CE Shepherd Gull Wing fill is engineered with solid PVC at wire contact points, fill retainer clips as shown above are not always required. In these cases, an alternate form of securing the fill bars to the wire hanger grids is by use of "Hog Rings". We offer the hog rings in either galvanized or stainless steel
